Objective

Seeking MS in Computer Science to gain advanced knowledge in ML, DL and agentic AI in order to devise AI-powered solutions that are egalitarian, accessible, and transparent.

Education

- Bachelors in Computer Science Engineering with Honours in Data Science from MMCOE, Pune (SPPU) from 2020 to 2024 with 8.84 CGPA
- 12th grade from Maharashtra State Board in 2020 with 84%
- 10th grade from Maharashtra State Board in 2018 with 94%

Work Experience

Associate Consultant | Emergys Solutions Pvt. Ltd. (Aug 2024 – Present)

- Developed a FastAPI backend and LangGraph-based agentic workflow, implementing intent classification, schema/data retrieval, SQL generation, query revision, and model-agnostic LLM selection.
- Built database interaction and database pool pipelines with natural-language-driven visualization, integrating LLM inference for querying and analysing relational data.
- Led UI development for the Should Costing module using React.js, Redux, Node.js, Express.js, and MSSQL, implementing modular components, What-If SKU-to-model mapping, and interactive cost-visualization dashboards.
- Optimized REST APIs, complex SQL queries, and stored procedures, reducing response times from minutes to seconds and improving application performance by ~50%.
- Developed a specialized Should Costing module and supplier portal for the chemical industry, integrating web search for real-time supplier discovery, automated data extraction, and LLM-based information enrichment using prompt engineering.

Software Development Intern | Mandrake Tech (Aug 2023 – Oct 2023)

- Developed a mock Gmail API server in Rust, implementing RESTful API endpoints to simulate Gmail operations and support backend development and testing.
- Implemented the Google OAuth 2.0 authentication flow, handling authorization, token exchange, and authenticated API access.
- Applied Rust concepts including ownership, borrowing, error handling, and modular programming to build maintainable backend components.
- Used GitFlow for version control and collaborative development, following structured branching and code-management practices.

Martian Intern | Persistent Systems (July 2023 – Aug 2023)

- Completed an intensive technical training program covering Linux, RDBMS, and Core Java, building a strong foundation in software development.
- Gained hands-on experience with Linux administration, including user management, process handling, and file access permissions.
- Learned relational database concepts and practiced DDL, DML, DCL, and TCL operations using SQL.
- Developed proficiency in Core Java, focusing on OOP principles, data structures, and exception handling.
- Strengthened understanding of software engineering fundamentals, forming the base for advanced development roles.

Intel Unnati Summer Intern | Intel (May 2023 – July 2023)

- Tasked with developing a social distancing detection system to identify whether individuals in public spaces maintained required safety distance.
- Utilized YOLOv5 for human detection and implemented distance estimation algorithms using camera resolution, focal length, and pixel distance calculations.
- Designed and optimized a real-time detection pipeline capable of processing live video streams and flagging distance violations with high accuracy.
- Gained hands-on experience in computer vision, object detection, OpenCV, and model optimization, strengthening understanding of AI-based surveillance systems.

Research Paper	• Smart Workout Companion / PoseCraft Fitness Navigator: AI-based system for posture monitoring and yoga pose refinement using MediaPipe & Deep Learning. • The Effect of Fake Reviews on e-Commerce and fake review detection (Jun 2023 – Nov 2023)
Certifications	• Microsoft Azure AI Fundamentals • AWS Academy Graduate – AWS Academy Cloud Architecting • AWS Academy Graduate – AWS Academy Cloud Foundations
Achievements	• Secured 2nd rank in Project Based Learning Competition – Issued by MMCOE • Presented peer-reviewed research paper at ICRTACT 2024 (International Conference on Recent Trends & Advancements in Computing Technologies).
Final Year Project	**Title:** Smart Workout Companion. **Objective:** Develop Smart Workout Companion, an AI-driven fitness application that provides real-time posture monitoring, repetition counting, and integrated yoga and meditation modules. The project aims to promote holistic well-being by combining machine learning and mindfulness to deliver personalized workout guidance and mental wellness support.
Extracurricular & Co-curricular Activities	• Technical Team Member – Robocon Rudra, MMCOE (Feb 2021 – Mar 2022) • Marketing Team Member - Google Developer Students Club, MMCOE (Jun 2022 - Jun 2023) • Student Member at ISACA (Oct 2022-Oct 2023) • Member of Association of Computer Engineers (Jun 2022-Apr 2023) • AI/ML Engineer at TEAM CODE, MMCOE (Jun 2023-Jan 2024) • Member at Rotaract Club of Pune City Fortune (Jun 2021-Oct 2022)
